

# Distance ~~great~~ learning

Learning for Life

$n$  - rows

$m$  - cols.

- Do define "similarity" you need a measure of distance
- Examples of common distance measures

- Manhattan Distance
- Eucledian Distance
- Chebyshev Distance

$$|x_1 - x_2| + |y_1 - y_2| + |z_1 - z_2| + \dots$$

$m$  - dim

$$\sqrt{[(x_1 - x_2)^2 + (y_1 - y_2)^2 + (z_1 - z_2)^2 + \dots]}$$

Chebyshev (or) the Chebyshev dist.

**greatlearning**

*Learning for Life*

$m$ -dim

$$\max(|x_1 - x_2|, |y_1 - y_2|, |z_1 - z_2|, \dots)$$

## Minkowski

	1	2	...	n
x	$x_1$	$x_2$		$x_n$
y	$y_1$	$y_2$		$y_n$

$$\left( \sum_{i=1}^n |x_i - y_i|^p \right)^{1/p}$$

if  $p = 2 \Rightarrow$  Euclidean dist.

if  $p = 1 \Rightarrow$  Manhattan dist.

if  $p = \infty \Rightarrow$  Chebyshev dist.

Connectivity based  $\sim$  roughly begin by computing  
500,000 dist  $\frac{n \times (n+1)}{2}$

Centroid based  $\sim$  roughly begin by computing }  
5-group  $5 \times 1000$  dist.
